

1 ABSTRACT OF THE DISCLOSURE

2 A tool arrangement combination of an insert tool
3 fabricated as a generally circular central body having a
4 plurality of spokes extending from the outside peripheral
5 edge of said central body, said spokes spaced apart to be
6 mountable into the channels formed on the inside peripheral
7 surface of the internal nut of a standard drain fixture.
8 Said central body having a non-circular opening
9 configuration to accept the insertion of a user-supplied
10 lever, usually a common tool such as a socket wrench handle
11 to complete the tool arrangement. The tool arrangement may
12 be used to evenly apply torque to say internal nut to
13 remove or tighten said internal nut of said drain fixture.
